MCA POS

An Oracle Based Point of Sale (POS)Solutions with Touch Screen Integration

MCA POS is a dynamic web-based retail management system that provides extensive POS functionalities and business management tools.

Benefits

Tailored to Address Your Specific Needs

MCA POS offers exceptional flexibility to customize as per your unique retail needs. It allows users to change their screens based on requirements using PC, Mac or iPad. Users have tremendous control over the look and feel of their POS terminal.

Easy and Fast Deployment

MCA POS is designed and developed for quick & easy deployment that helps in reducing the costs of ownership. Excellent user friendly & interactive graphics windows helps executives in their training and use.

Multi Location and Multicurrency Operations

MCA POS offers multi-location and multi-currency operations to exploit the opportunities available in today's retailing world. Users can manage inventory at various locations and ensure availability of product assortment as per the specific need of a particular outlet.

Easy Integration with ERPs

MCA POS can be integrated with ERPs that offers holistic view of businesses operating at different locations. It helps tracking and controlling the key business activities by making smart strategies on time.

Extensive Reporting

MCA POS is equipped with both standard and user defined reports (Shift wise Report- Daily, Weekly, Monthly, Date wise reports, Time wise sales analysis/customer visits etc.) that can be further customized to gain insights and make better business decisions.

Highly Secure

MCA POS has exceptional user access control by specifically defining and authorizing executives to perform a particular functions. Executive's shift wise transactions can be monitored and control. It prevents data theft and wrongdoings excellently.

Customer Registration System

This feature provides most appropriate and easy ways to register customers and build their electronic records containing their purchasing history & related information. Those data can be extracted at any time, to modify by the user easily and accurately at the time of repeat sales.

Integration of Functions in a Single Screen

A single screen integrates a number of functions of different screens. The same screen use to display, edit and enter detailed information about anything the user targets; rather than using of seperate screens for each process.

Backup System

A backup system has been constructed to assist in the maintenance of user data, and to prevent significant data loss through storing it into external storage devices such as (CDR, Flash, Removable Hard drive etc.).
